

Training of Diplomats Guarantee Training Effectiveness through use of the Quality Assurance System (ISO 10015)

LICHIA YIU¹ AND RAYMOND SANER²

INTRODUCTION

THE SCOPE OF DIPLOMACY HAS BROADENED FROM TRADITIONAL, STATE-TO-state relations to also include non-state actors (Saner & Yiu, 2003), thereby resulting in a multitude of new challenges for Ministries of Foreign Affairs and traditional diplomats. Learning new skills and acquiring new knowledge is no longer a 'nice to have', it has become an absolute necessity for today's diplomats.

As stated by Kinney (2006), the continued growth and increasing complexity of international and regional diplomatic processes and negotiations requires that more diplomats are given training and provided with learning experiences in the diplomatic tradecraft in the coming decade. A view shared by Rana (2006) who suggests that 'Training more important than ever for diplomats'.

As most Ministries of Foreign Affairs face budget cuts or frozen budgets, meeting these new challenges through training becomes increasingly difficult, particularly as proper training for effective management is often the first item to be cut from the MFA's shrinking budget. Hence, proper

¹ Professor Dr Lichia Yiu, President, Academy for Quality in Training and Education (AdeQuaTE), Geneva, www.adequate.org

² Professor Dr Raymond Saner, Director, Diplomacy Dialogue, Geneva, www.diplomacydialogue.org

utilization of scarce training resources is a must requiring more effective and more efficient management of training processes and training systems.

In the past, the training of diplomats was either outsourced to universities or organized internally within governments through a) a School of Public Administration, b) a Diplomatic Academy attached to Ministries of Foreign Affairs or, c) a training unit within the MFA utilizing external and internal speakers and trainers.

Traditional diplomatic training tends to be academic in orientation and less application- and management-focused, but in today's dynamic and crisis-prone international arena where new complex problems emerge in sometimes rapid succession and where alliances form, shift, and dissolve quickly, much of the pre-programmed and predominantly history-oriented learning and curricula of traditional diplomatic training no longer ensures acquisition of new competencies (defined as the ability to apply knowledge, skills, and behaviours in meeting requirements) to fit today's performance demands of contemporary diplomacy. Diplomatic schools and institutions have not been perceived as responding to these new challenges and work requirements in a timely and apt manner.

WHY CONSIDER QUALITY ASSURANCE?

The need for improving the cost structure for delivering diplomatic training, and the need to increase the effectiveness of diplomatic training have become more pressing these days as budgets are being cut, but the demand for training is increasing. At the same time, the customers (MFAs), are demanding greater accountability from the service providers (diplomatic training institutions).

Matteucci (2006) in considering ways and means to enhance the performance of MFAs has put forward four major points for adoption by the diplomatic community and the MFAs. They are:

- (a) Determine the cost of doing business;
- (b) Mobilize the know-how about best practices;
- (c) Establish internal checks and balances;
- (d) Husband the people in the organization.

While item (d) is the core business of diplomatic training institutions, the other items (a to c) have indirect bearing on how diplomatic training institutions should manage their own affairs and practices.

In contrast to traditional training 'administration', a new approach

is needed based on managing training activities, namely 'training management'. Training management is designed to make sure that the training results in the acquisition of new and relevant competencies is subsequently applied to the field of work to ensure the improvement of organizational performance of the diplomatic service.

Such a managerial approach to training has to be considered seriously and adopted by the diplomatic community if the service providers want to survive and thrive in these times of great turbulence and partial breakdown of diplomatic processes.

Some diplomatic training institutions have improved their training content and methodology, but most of today's diplomatic training has not gone far enough and does not yet ensure that the training offered relates to actual performance improvement in our Ministries of Foreign Affairs and Embassies.

On the institutional governance and management front, little has changed. Matteucci suggests (2006) that Quality circles could be adopted which have been used in Japan to mobilize institutional know-how. However, quality circles have their limitations in ensuring a truly comprehensive training quality management system and in delivering the expected results.

High organizational performance depends on high human competence. As Rana (2005) stated: '*Human talent is the only real resource in a foreign ministry*' (italic added). Hence, the higher the competencies of its employees (diplomats), the higher are the levels of the respective organization's performance (Jacobs, 2001). According to Noe (2005), training is 'a planned effort by (an organization) to facilitate employees' learning of job related competencies'. Therefore, training should help employees/diplomats to develop competencies which in turn contribute to the organizational performance of their respective MFAs.

The old notion that training is routine business is no longer adequate; instead, quality assurance (QA) should be an integral part of the internal management of diplomatic education and training institutions so that continuous improvement becomes the norm rather than the exception.

TRAINING WITHOUT QUALITY ASSURANCE IS HIGH-RISK INVESTMENT

Capacity building for training is crucial to ensure the successful performance of diplomats and of the Ministries of Foreign Affairs. However, ministers also need to take into account that training as an instrument

for change and improvement often does not provide expected results. Many times, investments in training are not successful and intended objectives through training are not met, leading to disappointments and unhelpful attributions of blame. Worse of all, ineffective training can easily provide the constituencies with a false sense of confidence, thinking that competence deficits have been effectively improved, when in fact the opposite might be the case. Inefficient and ineffective systems of education and in-service training exist in many countries (Saner, Strehl, Yiu, 1997).³ However, it would be misleading to look at the education and training sector as if it were a beauty contest. What matters most are the results (skills acquisition, know-how acquisition and increased behavioural competencies of trainees), not output figures (number of trainers, number of training programmes or number of training Centres etc.). At the final end it is the outcome measures, which determine whether or not a given training system is effective or ineffective.

WHAT IS QUALITY ASSURANCE IN DIPLOMATIC TRAINING?

To be effective, efforts to build individual skills and knowledge must be embedded in an overall framework to ensure that diplomats can apply their new skills on the job, be it at headquarters, or at larger or smaller missions, to improve their performance and productivity in international relations and in regard to the operations of a field office; otherwise, individual competencies might improve, while organizational performance stagnates or declines.

MFAs that want to take advantage of the opportunities offered by the information and telecommunication technologies, for example, do not just need to train a few diplomats on how to use e-mail and search engines to monitor current events. On the contrary, a whole suite of inputs is required, including: (i) skills in public diplomacy in a virtual online environment (e.g. an interactive approach to online communication for the general public, rather than simply putting up a few statements on a website), (ii) performance management (e.g. how to assess productivity and performance results), and (iii) organizational values and norms concerning transparency and sharing of information.

³ Results of our comparative research involving 10 central governments and two provincial governments were published by the International Institute of Administrative Science, Brussels, 1997.

Quality assurance in this context is about making sure that learning will close reported competence gaps and prepare diplomats for future challenges. It is about ensuring that individual learning will be transferred back to the ministry and will impact the MFA's overall performance, measured in productivity, quality and impact. Quality assurance therefore requires a management system and involvement of the stakeholders in determining the training needs, selecting the appropriate training modality and approach, and monitoring the delivery of diplomatic training before, during and after the training takes place.

A 'canned' diplomatic training programme might be sufficient for the general orientation of the new diplomats-to-be, but is no longer sufficient for mid-career and senior diplomats who not only have diplomatic roles and functions, but also perform leadership, supervisory, and managerial roles and functions of a department at an embassy or a consulate. Training programmes for these categories of diplomatic personnel require differentiation, tailoring, and context-specific application in order to be meaningful and effective.

In order to achieve real results, diplomatic training must go beyond an 'event' type of approach that focuses on providing short topical seminars or focusing on traditional basic generalist courses. Instead, diplomatic schools and training units within MFSa need to be more closely integrated into the service delivery (or production) of diplomacy and international relations and involve seasoned diplomats—not only as occasional speakers but also as key partners with regard to the identification of training needs, training design, monitoring, evaluation and post-training support and mentoring. In other words, the full impact of diplomatic training can only be accomplished if there is a learning culture ingrained within the MFA, if there is line-management involvement, and if there is a diplomatic training function which drives this learning and development process. Otherwise, diplomatic training remains academic, abstract and decoupled from the day-to-day operational challenge of practicing diplomatic tradecraft and managing the MFAs.

WHAT ABOUT QUALITY OF TRAINING INVESTMENT?

What quality system could best support a Ministry of Foreign Affairs in improving the efficiency and effectiveness of its SSD training? Different quality standards and instruments are available to measure quality of

training, such as ISO 9000, the European Foundation for Quality Management (EFQM), or some form of Total Quality Management systems.

Several governments have used either of the three quality instruments mentioned above with mixed results. Some felt these standards were sufficient, others considered the three instruments as being too bureaucratic, too industry oriented and not sufficiently adjusted to the peculiarities of the training process. A survey of seven countries indicated a trend away from the three traditional quality instruments.⁴

However, none of the quality instruments mentioned address the actual pedagogical process itself, nor the interaction between organisational performance objectives and the training intervention within companies or public organizations.

ISO 10015: the new solution to the quality question

Realizing the need for more sector-specific guidance for quality assurance of training, a working group was created within ISO to draft a standard for training. Twenty-two country representatives developed the draft text over several years culminating in the publication of a final official standard ISO 10015 issued by the ISO secretariat in December 1999 (Yiu and Saner, 2005). The new ISO standard offers two main advantages namely:

- a) being based on the process-oriented concepts of the new 9000:2000 ISO family of standards, and hence being easily understandable for administrations already used to ISO-related Quality instruments; and
- b) being a sector-specific standard, that is pedagogically oriented, offering MFAs specific guidance in the field of training technology and organizational learning.

What follows is the description of two key features of the new ISO 10015 standard.

What is ISO 10015?

ISO 10015 Quality Standard for Training is one of the QA instruments available that emphasizes stakeholder involvement in defining training needs, uses independent third parties for regular reviews, and focuses

⁴ Raymond Saner; 'Quality Management in training: generic or sector-specific?', ISO Management Systems, Geneva, July–August 2002, pp. 53–62.

on the learning outcome and on-the-job transfer. Therefore, ISO 10015 ensures that the core competencies needed by the MFAs to adapt to the changing environment of world politics and to safeguard a country's needs and interests are fostered through training.

The ISO 10015 quality standard, available since 2000, offers the most succinct quality assurance criteria for training and continuing education to date and is available for private and public organizations interested in improving their return on training investment. The main features of the ISO 10015 quality standard for training are illustrated in Figure 1 below.

The core elements of an ISO 10015 training management system consist of the following: a decision making tree (Part A) and a training cycle (Part B). Part A deals with the *raison d'être* for training (the why) and the competence gaps of MFA staff that impede on the performance of a MFA or a mission; Part B deals with the actual development and implementation of training (the how to).

Looking at the diagnostic tree above (Figure 1), a MFA has to determine first what is the performance challenge that it faces and what are the causes of this challenge. It should ask itself why it is currently not able to reach expected performance goals? Such performance goals could e.g. be set by a Performance Management System⁵—Is it because a MFA

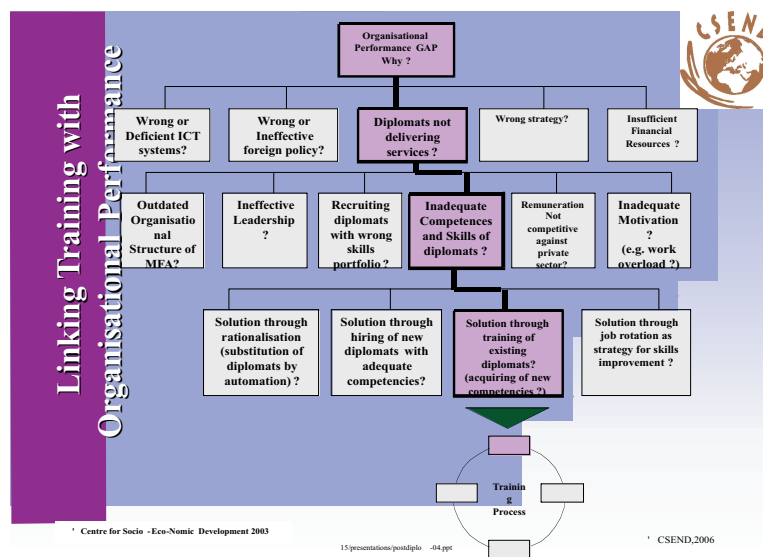

Figure 1: Linking Training with Organizational Performance (Part A)

it is governed by inadequate laws and policies? Or might it be that the new laws and policies are in place but the procedures to apply them are missing? Is the quality of its administrative services poor because the diplomats do not know how to apply them?

If the performance gap is linked to underperforming diplomats, then the Ministry should ask itself, why do our diplomats underperform—Is it because their competencies do not fit the job requirements? Are they remunerated below labour market rates and hence are demotivated or ready to switch jobs and move to the private sector? Is the current MFA's leadership deficient, causing diplomats to feel demotivated? If none of the above is applicable, it might be that their underperformance is due to a lack of skills and/or knowledge. If so, then training would be the right solution.

ISO 10015 in this regard offers a clear road map for guiding a MFA in making sound training investment decisions by asking the top MFA line managers (department heads) to connect training to performance goals and use it as a strategic vehicle for individual and collective performance improvement. As a result, the success of training is not only measured by whether diplomats have improved their personal/individual competence, but also whether diplomats have positively contributed to the Ministry's organizational performance.

ISO 10015 can help link Part A (organizational performance needs) with Part B (competence acquisition through training). The standard provides a systematic and transparent framework for determining how training programmes can contribute to the overall performance objectives of the organization/institution, while simultaneously identifying whether other interventions are needed (e.g. non-training-based interventions). The training management system thus leads to better design *ex ante* and delivers data for continuous improvement of training systems.

ORGANIZING DIPLOMATIC EDUCATION AND TRAINING ON THE BASIS OF PEDAGOGICAL PRINCIPLES AND PROCESSES

Training as an intervention strategy is called for once the MFA has established that the training of current diplomatic staff is the optimal approach to closing the Ministry's performance gap. Subsequently, the

⁵ For performance Management in MFAs, see Rana (2004).

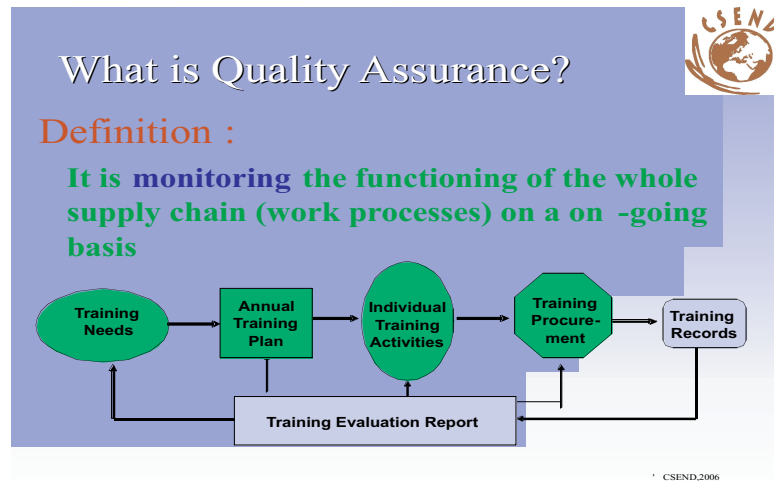

Figure 2: What is Quality Assurance

next critical phase of investing in people is that of establishing an appropriate training design and effective learning processes. Diplomatic training needs to be seen as a production process as indicated in Figure 2 below.

Applying ISO 10015 to External Training Providers (Outside of MFA)

Applied to for instance a Diplomatic Academy or a School of International Relations located outside of a MFA (e.g. attached to a university), one can visualize the educational production process in a similar manner as depicted in Figure 2 above but applied to a more formal educational setting where inputs (budget, curriculum etc.) and outputs (e.g. minimum–maximum number of students per year trained) are set by the government’s ministry of education. However, what is often missing in formal higher educational settings is an effective quality assurance system which guides and governs the pedagogical process of academic teaching. In this regard, ISO 10015 could also serve as a management tool to ensure that diplomatic schools conduct their education based on agreed high quality pedagogical processes as depicted in Figure 3 below.

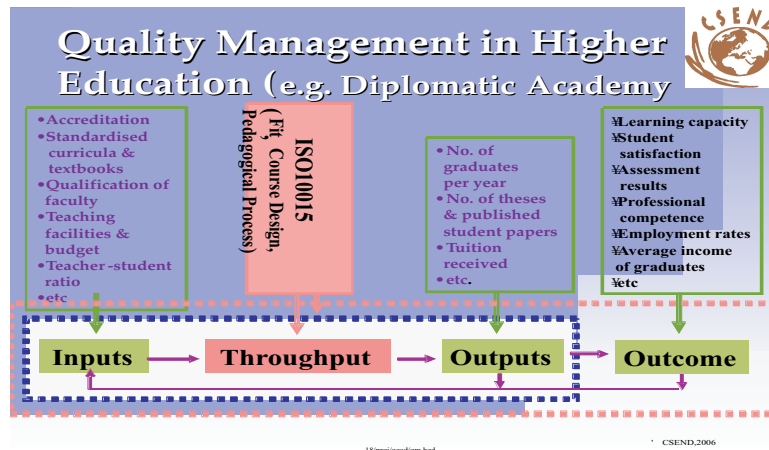

Figure 3: Quality Management in Higher Education (e.g. Diplomatic Academy)

Applying ISO 10015 to in-service diplomatic training (within MFA).

Applied to in-service diplomatic training (training conducted by a unit within the MFA), ISO 10015 offers easy-to-use guidance on how to organize diplomatic training in an efficient and effective manner. Following the well-known Deming Cycle, ISO 10015 defines training as a four-step process, namely, Analyse-Plan-Do-Evaluate. Each step is connected to the next in an input and output relationship (see Figure 4). As a quality management tool, ISO 10015 helps to specify the operational requirements for each step and establishes a procedure to monitor the process. Such a transparent approach enables training management to focus more on the substantive matter of each training investment rather than merely on controlling the expenditure.

Unlike other quality management systems, ISO 10015 helps an organization link training pedagogy to performance objectives and link evaluation with the latter as well. Such a training approach provides an organization with constant feedback regarding its investment in competence development. Similarly, at a higher aggregate level, ISO 10015 offers MFAs the opportunity to examine their training models and to validate their training approaches and operating premises by the use of comprehensive data.

competence requirements of its key functions and incumbents within the ministry, and in subsequently systematically investing in their competence maintenance and skill enhancement. Instead of treating staff development and diplomatic training as de facto part of the staff benefits, an ISO 10015-based management system can support the MFA in its effort of 'reinventing' itself and in strengthening its institution capability by closely linking the organization's development needs with the individual learning of its diplomats.

INSTRUCTIONAL SYSTEMS DEVELOPMENT

In addition to the need for effective capacity-building management and quality assurance systems for twenty-first century diplomacy, the process of developing instructional systems should be given greater consideration during the design phase of diplomatic training initiatives. Too often, subject matter experts, such as international relations specialists or seasoned diplomats, focus on topical issues of international relations, because this is what they know and are interested in, while overlooking or ignoring institutional and managerial issues that are crucial to ensure sustained and effective outcomes. Subject matter experts (and programmes designed and managed by them) tend to undervalue the task of needs assessment and thus fail to consider the full breadth of factors that act to either enhance or inhibit performance.

PROFESSIONAL APPROACH

The adult training literature offers new models for instructional systems design that are more compatible with the real 'business' environment (global competition, fragmentation and decentralization of power, non-state actors and fringe groups), utilizing the 'life case' method⁶ and other interactive methods to address the changing political context of today's world. This invariably means that diplomatic training should be seen as contributing to improving the performance of diplomats and performance of the MFAs. Adult training professionals can help subject matter experts design their instructional programmes in such a way that they meet the needs of adult learners (e.g. shifting the pedagogy to a more learner-centred, experience-based and interactive approach) and their organizations.

The application of a quality assurance management tool such as ISO

⁶ This can be in the form of a life-case study, or life-case simulation.

10015 would bring additional benefits. Too often, outdated learning models continue to be deployed in the field of international relations and diplomatic studies. The adoption of ISO 10015-based training quality management systems would encourage diplomatic training schools and institutes and experts/trainers to pay more attention to the impact of their training and hence to adopt appropriate and innovative training methodologies and to ensure a high level of ‘teaching’ competency among instructors.

EXAMPLE OF POSSIBLE APPLICATION TO TRAINING DIPLOMATS IN PUBLIC DIPLOMACY

Based on the performance gap analysis, an MFA could for instance decide to close its diplomat’s performance gap (see Figure 5) in regard to Public Diplomacy by organizing training programmes on public diplomacy. The organization of such training programmes could for example consist of:

1. Concrete definition of training needs for specific target groups;
2. Custom-tailored training (and instructional) design and planning for training;
3. Providing logistical support for training, actual delivery of training and post-training follow-ups;
4. Evaluation of training at different Kirkpatrick levels (1967).

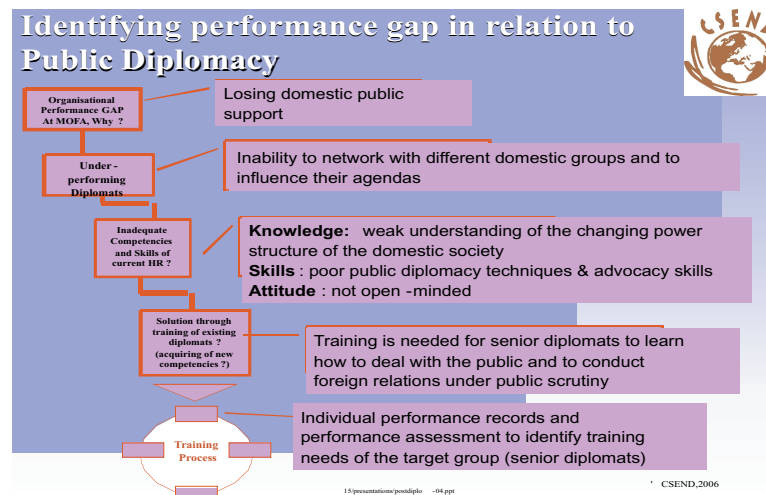

Figure 5: Identifying performance gap in relation to public diplomacy

The illustration of this training cycle is presented in Figure 6.

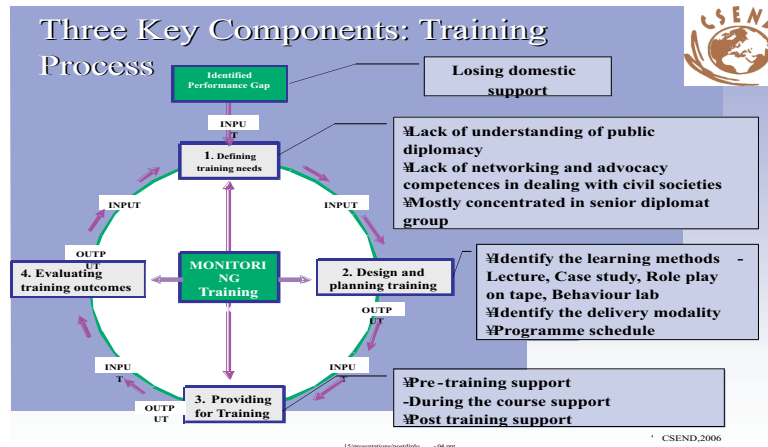

Figure 6: Illustration of A Structured Approach to Training Cycle

CONCLUSION

In light of the rapidly changing and increasingly complex nature of today’s international relations and diplomacy, Ministries of Foreign Affairs need more urgently than ever before to invest in diplomatic training. Only the quality of a Ministry’s human capital can ensure long-term competitive advantage in our knowledge economy and in postmodern diplomacy. In a knowledge-based economy, training is ‘mission critical’ and should not be considered as an activity ‘nice to have’ and therefore dispensable at times of budget cuts or difficulties. Instead, MFAs should aim to ensure resource optimization and greater effectiveness of training investment.

Diplomatic training, as one of the most frequently used approaches to tackle performance issues, needs to be managed carefully like any other major investment. ISO 10015 offers a new and sector-specific quality management tool to ensure the link between training and organizational performance needs of today’s MFA. It also offers a transparent and easy to follow process to ensure a sound and logical link between the four steps of any diplomatic training process and an MFA’s mission and performance requirements—thereby strengthening the expected results of such training investment. The expected outcome of training investment should be two-fold, namely increasing personal competence of diplomats

and a concomitant increase of organizational performance of the Ministry of Foreign Affairs. Without a *structured* approach to training and a *predictable* process for continuous improvement, such expectations cannot be fulfilled.
